

ABSTRACT OF THE DISCLOSURE

A body device includes: a plurality of sound sources;
a speaker and a headphone for outputting sound signals from
those sound sources; and a mode setting unit capable of setting
5 a single mode, in which the sound signals from one sound source
are output in response to an operation from a front operation
unit, and a dual mode in which, while the sound signals from
one sound source are being output from the speaker, the voice
signals from another sound source are output from the headphone;
10 an external connection unit for connecting an external DVD device
with the outside; and a control unit for controlling a mode
setting unit so that the body device may be turned ON in the
dual mode when a power ON demand signal from the external DVD
device or a rear operation unit is detected.
